Dear Friend,

You have in this kit, the most technologically advanced agricultural products ever created. Our new Premium Combo Field Sprays™ are a technological breakthrough that has taken 14 years to perfect, at a cost of over \$1.5 million and untold man hours, research, field trials and tests of all kinds.

These Field Sprays, tested and proven effective in the field for six years, are made to enhance the growth and health of plants and engineered to work in harmony with the lengthening of the days from December 22 until June 21, or the shortening of the days from June 22 to December 21. Plants grow differently during these times. Many fruits, for example, create their flavors during the Spring, then they mature and sweeten as daylight hours grow shorter during the Summer and Fall, after June 21.

We find it extremely beneficial to have a product that works with these different Forces of Nature in such a way that they enhance and improve everything in your garden, lawn, landscape, orchard, vineyard and farm. With these extraordinary new tools, now YOU have, for the first time - ever, the power to guide the Forces of Growth in your plants, directly. You will find these products miraculous.

This packet contains a sample size of the GW Agriculture™ Premium Combo Field Spray™ appropriate for the time of year in your locale, and a bottle of Fungus Interruptus™. This is enough spray to treat 1/4 acre one time, or a small garden several times. Please read the labels for directions.

Laboratory and field testing have shown that our Field Sprays control and can eliminate bacterial and viral diseases in plants. No other agricultural product or GMO can do this. Anywhere. Fungus Interruptus™ has shown to stop and prevent the growth of fungus on contact. Plant disease is the single greatest factor causing low yields and low quality. Now you have the means to eliminate it.

Fungus Interruptus™ is NOT a fungicide. It is made with quartz and Equisetum (a plant) in purified natural spring water. It simply changes the environment around the plant so that fungus does not thrive there. There is **no other way** to prevent or cure plant diseases. Our products are the only products that do it.

The Premium Combo Field Sprays™ and Fungus Interruptus™ encourage new, healthy growth. Neither are fertilizers. Both are prepared homeopathically in water with herbs and minerals approved for certified organic farms. Shelf life is five years.

**They are completely safe when used according to the directions.**

Apply the sprays following the instructions on the recyclable bottles. If, for some reason, you make a mistake, simply reapply them. They are self correcting. Once every 3 months, spray the Premium Combo Field Spray™ toward the ground 4 times every 15', then immediately spray ONE TIME in the same area in the air or toward the leaves with Fungus Interruptus™. They are extremely potent and will treat up to a 30' diameter circle with just one application. Do this same procedure every 15' around your garden, field or property. This is all the coverage you need. Plants in pots or containers must be sprayed individually.

For areas where fungus is a problem throughout the growing season, such as orchards and vineyards, apply Fungus Interruptus™ once every 3 weeks, one spray every 15' toward the leaves if it is a fruit or leaf fungus, or toward the ground if it's a ground or root fungus. This should reduce or eliminate that problem. If it's not working, give us a call. Sometimes there are other issues that must be addressed.

All GW Agriculture™ consumer garden products carry a 100% money-back guarantee at the retail level. But I have to tell you, in the six years we've been making and selling these homeopathically prepared sprays, we've never had a single complaint. No one's ever asked for their money back.

Please read the enclosed literature for more about our other amazing products. If you ever have a question, please feel free to call us. We're here to help you. Happy gardening. Happy landscaping. Happy farming.

Sincerely Yours,

Greg Willis
